

Recruiter Tier - Master Plan

Live build **v128** - updated 2026-07-18. Status: **R0 through R9 COMPLETE**. The two-sided marketplace is built end-to-end and is honestly advertisable.

The invariant that governs everything

Candidate-first. The candidate product is the product. No recruiter feature may add a Firestore read to the candidate hot path (deck / Browse / auth), and a pure candidate must never trigger a recruiter-doc read. This is enforced by a Playwright test that counts recruiter reads during candidate browse/swipe/auth and asserts zero. It is why the v108 cross-device recruiter detection reads the PROFILE role marker (already loaded at sign-in) rather than probing the recruiters collection for everyone.

Consent + privacy model (non-negotiable)

Candidate contact is **never sold and never purchasable** - on any plan. A candidate is surfaced to employers only if they opted in (discoverable, default OFF), and opting in is consent to be found AND contacted. In the recruiter Candidates tab, matches are **anonymous until the candidate accepts**: match %, market and skills only - no name, contact or resume. An applicant who applies to a role shares a bounded resume + cover letter snapshot **with that employer only** - applying is the consent.

Sprint status

Status	Item	Detail
DONE	R0 Foundation	Security rules + emulator suite + in-repo reverse-match scorer + scaffolding.
DONE	R1 Frontend entry	Employers nav + footer link, employer view, recruiter auth with live corporate-email gate, admin verification queue.
DONE	R2-A Onboarding	Signup fork, required company + website, full company/contact profile.
DONE	R2-B Job posting	Create/list own internal roles; hidden until admin-approved.
DONE	R2-C Internal apply	In-app apply + applicant counts (count aggregation, D1-safe).
DONE	R2-D Candidate opt-in	Discoverable toggle, default OFF, top-level profile field.
DONE	R3 Reverse-match	buildMatchTokens (opted-in only) + runReverseMatch -> jobs/{id}/recommended_candidates. Nightly Action 06:30 UTC.
DONE	R4 Matched dashboard	Ranked candidate cards, bounded owner-gated query.
DONE	R5 Outreach + anti-ghosting	Reach-out / respectful decline, Anti-Ghosting Badge, appeal flow. Consent-gated at the rules layer.
DONE	R6 Candidate tray	Employer messages in Settings; Interested / Not now.
DONE	R7 Scheduling	Propose up to 3 slots; candidate picks; confirmed time returns to the recruiter inbox.
DONE	R8 Billing	Free = 5 live roles. Premium \$79/mo, Pro \$149/mo via Stripe hosted checkout.
DONE	R9 Full recruiter view	The 6-tab reskin. See below.

R9 - the recruiter view (v109-v110)

Architecture (founder-approved): reskin the existing 6 tabs by account role rather than build a parallel view system. One role check drives each tab's content and the nav labels. Recruiter content lives in a .rec-panel per view; a .rec-mode CSS class hides the candidate content. **The candidate views are never modified** - zero regression by construction, proven by a dedicated no-regression test. This also fixed the desktop 'For Employers' bug for free: the root cause was that buildDesktopGrid never moved #view-employer into the desktop workspace, so the view rendered outside the clipped grid and clicking did nothing.

Tab	Candidate	Recruiter (v110)
Swipe	Job matches deck	Candidates - anonymous matches across live roles (match %, local, skills; no PII). 'Send them this role' fires the R5 outreach; the candidate sees a hot match in their tray.
Browse	Job list	Applicants - your roles, expand to the applicant list, tap for the Candidate Card with resume + cover letter.
Resume	Resume Studio	Listings - post roles, applicant counts, Mark filled (closes the role), Remove.
Ghosts	Ghost reports	Reviews - your company ghost-risk score + report count + dispute to GhostProofJob.
Account	Personal profile	Company - full company profile, saved to Firestore.
Settings	Candidate settings	Settings - recruiter verbiage + the Stripe Plan card.

Nav relabels on both the mobile footer and the desktop rail. Recruiters auto-route to the Candidates tab on sign-in (cloud role marker, works on any device). 'For Employers' is hidden for signed-in individuals and shown to guests (marketing), admins (testing) and recruiters.

Data + rules model

recruiters/{uid} - the recruiter doc; isValidated is admin-only (no self-verify).

companies/{domain} - recruiter may create/update only their own-domain doc; can never self-set verifiedEmployer.

jobs/{id} - owner creates internal roles hidden (active:false, isValidated:false). Owner may edit content and **close** a live role (active true->false, v110) but never self-activate (false->true). Admin approval sets active + isValidated.

jobs/{id}/applications/{uid} - candidate owns their application; owner-recruiter reads it. Carries the apply-time resume/cover snapshot.

match_tokens/{uid} - backend-written, opted-in candidates only; verified-recruiter read.

reachouts/{id} - verified recruiter creates, consent-gated (candidate has a match token OR applied); status sent; kind reachout|rejection; message <= 800. Only the recipient may respond (interested|declined|appealed), accept a slot (acceptedTime <= 200) or appeal a rejection (appealMessage <= 400). No deletes - the outreach trail is an audit record. All of the above is emulator-proven: **83/83**.

Pricing

Free - up to 5 live roles, matched candidates, outreach + anti-ghosting included.

Recruiter Premium - \$79/mo - more live roles + candidate matching.

Recruiter Pro - \$149/mo - highest role limit + priority placement + full reverse-match reach.

Both open Stripe hosted checkout in a new tab; card data never touches the app. Candidate-side pricing is unchanged and unaffected: free until hired, applications always unlimited.

What remains

Status	Item	Detail
TODO	Public review replies	v110 ships view + dispute-to-admin. Public replies to individual reviews need a moderation model.
PART	Matches need data	Candidates/Applicants are empty until the nightly reverse-match runs and candidates opt in or apply. Honest empty states ship.
TODO	Rules redeploy	v110 adds the close-role permission. FOUNDER ACTION.
TODO	D1 read-cost	Deliberately last, after all features + marketing.
