

Master Audit Checklist & Roadmap

Live build **v122** - updated 2026-07-18. Benchmark all-pass (div 2091/2091, boot RAN TO COMPLETION, mirror byte-identical, 0 duplicate DOM ids, 251 handlers / 0 missing). Playwright **267 pass**. Rules emulator **83/83**. SEO tests **13/13**. CI green.

Where the product stands

The candidate product is launch-ready and the employer product is complete end-to-end (post - apply - reverse-match - outreach - interview), with the anti-ghosting promise enforced structurally on both sides. Live AI and lifecycle email are deployed. What remains is operational and growth work, not missing product.

1. Candidate product - LAUNCH READY

Status	Item	Detail
DONE	Job discovery	Swipe deck + Browse, location-scoped, ghost-risk flagging, stale/verified detection, pool de-dupe.
DONE	F-GEO distance filter (v106)	Max Distance re-enabled: offline city centroids + haversine, client-side, ZERO extra reads. Remote/unknown always pass.
DONE	Resume Studio + Jett AI	Parse, LinkedIn import, summary synthesis, key duties, skills tidy, 5 templates, PDF export.
DONE	AI honesty + self-heal (v105)	Every AI button is transparent when it falls back to smart templates (says why + when live AI returns). Double-verb bullets self-heal at render.
DONE	Match-to-Job + Requirements Check	Real overlap vs a posting; honest gaps, no echoed skills.
DONE	Cover letters	Job-aware, revisable, stored; no placeholder text.
DONE	Accounts + sync	Auth, cloud profile, cross-device, account-switch desync fixed.
DONE	Fair-use tiers	Hyper-Drive / Core Search / Base Camp. Applications ALWAYS unlimited. No dark patterns.
DONE	Referral engine (v107)	Invite link -> Booster when a friend joins + sets up a resume. Rules-gated: no self-referral, no pre-onboarded farming.
DONE	PWA + Admin portal	Installable, versioned cache, iOS auto-update; admin counts + verification queues + view-as-employer.
PART	iOS PWA safe-area (7c)	Coded and test-locked; only verifiable on a real installed iPhone (env()) cannot be emulated). FOUNDER CHECK.

2. Employer / recruiter product - COMPLETE

Status	Item	Detail
DONE	R2-A Signup + email gate	Corporate-domain only; account-type fork; full company + hiring-contact onboarding.
DONE	R2-B Post + admin review	Roles hidden until an admin verifies them.

Status	Item	Detail
DONE	R2-C Internal apply	In-app apply; applicant counts. v110: apply snapshots a bounded resume + cover letter (consent-to-share).
DONE	R2-D Candidate opt-in	Discoverable, default OFF - consent to be found AND contacted.
DONE	R3 Reverse-match engine	Nightly GitHub Action scores opted-in candidates per role; applicants ranked first; bounded reads.
DONE	R4 Matched candidates	Ranked cards, match %, skill chips. Never sold, never purchasable.
DONE	R5 Outreach + Anti-Ghosting Badge	Reach out or send a respectful decline; responsive recruiters earn a visible badge. Appeal flow for declines.
DONE	R6 Candidate tray	Reach-outs + declines in Settings; Interested / Not now.
DONE	R7 Interview scheduling	Recruiter proposes up to 3 slots; candidate picks one; confirmed time returns to the recruiter inbox.
DONE	R8 Plan caps + Stripe	Free tier = 5 live roles. Recruiter Premium \$79/mo + Pro \$149/mo wired to Stripe hosted checkout.
DONE	Billing automation (v114-v116)	Stripe webhook GRANTS and REVOKES on both sides: checkout grants; cancel / non-payment / full refund / chargeback auto-drop to free. A lapsed paidUntil reads as free even if a webhook is ever missed.
DONE	Company team (v112)	Owner / admin / standard roles; email-bound invites redeem a company seat on first sign-in; seats by plan (Free 1 / Premium 5 / Pro unlimited).
DONE	Notification centre (v116)	Bell + unread badge between the account chip and the plan button; reuses existing data (no new reads); click-through lands on the right tab.
DONE	Listings EDIT in place (v117)	The same form edits a live role - previously it could only be deleted and re-posted, which threw away its applicants. The seat cap does not fire on an edit. A repaint mid-edit no longer eats unsaved typing.
DONE	Founder live-test sprint (v118-v121)	Employer jobs can never be buried in the pool; preferences persist across logins; ghost-risk is REAL signals only (no fabricated %); street-safe City/State; benefits + up to 5 custom application questions; company logo upload; admin approval alerts (bell + nightly email digest); candidate withdrawal + Seen-by-employer status; signup attribution; honest duplicate-apply guard.
DONE	Password recovery (v122)	Forgot password on BOTH auth modals - before this a forgotten password was a permanent lockout (no reset path existed anywhere).
DONE	Verified fill-source (v117)	Closing a role asks HOW it was filled: hired via GhostProofJob / filled elsewhere / cancelled. A GPJ hire logs an anonymous aggregate proof-point; 'filled elsewhere' deliberately does NOT count as our hire.
DONE	R9 Full recruiter view (v109-v110)	All 6 tabs reskin by role with real functionality. Fixed the desktop 'For Employers' bug. Zero candidate regression by construction.
DONE	Security rules	Scoped writes, no self-verify, verified-recruiter gates, consent-gated outreach. Emulator-proven 103/103.

3. Ghost-proofing, growth & marketing

Status	Item	Detail
DONE	F-GHOST cross-user reports	Shape-locked ghost_reports collection (no free-text/PII). 'Another hunter reported this' works cross-device.
DONE	Email opt-out / CAN-SPAM	/api/unsubscribe one-click + suppression honored globally; Worker attaches the footer + mailing address; daily cron skips opt-outs.
DONE	Ghost-content engine	Drafts a week of posts from live ghost data with defamation guardrails; never auto-posts.
DONE	SEO page generator	61 static 'ghost jobs in {city}' pages + index + sitemap.xml + robots.txt. ZERO runtime reads. Honesty rules enforced as tests. No company pages (legal review).
DONE	Referral engine	See candidate section.

4. Outstanding - the real remaining list

Status	Item	Detail
TODO	D1 Firestore read-cost	~163K reads/day, over free tier. Blaze trial credit ends 2026-09-19. Pagination + session cache + query caps, or a budget. DELIBERATELY LAST - after all features + marketing, so there is less read/write to optimize.
PART	iOS PWA safe-area (7c)	Founder device check clears it.
TODO	Reviews: public replies	v110 ships view + dispute-to-admin. Public company replies to individual reviews need a moderation model - phased for later.
TODO	Company SEO pages	Deliberately OFF until legal review.
TODO	Full internal scheduling	R7 minimal-real slots shipped; NEXT SPRINT: date/time pickers, an Interviews section both sides, reschedule/cancel, bell reminders.
TODO	Account deletion	No delete-my-account path exists yet (privacy/trust gap found in the v122 e2e audit; auth imports already anticipate it).
TODO	Surface the verified-hire data	v117 STARTS capturing how each role was filled. Nothing displays it yet - the aggregate ('N roles filled via GhostProofJob') needs a view before it can be used as a public proof-point.
PART	Candidate messaging depth	Outreach is one reach-out + one structured response (interested / not now / slot / appeal). There is no back-and-forth thread; scheduling is free-text slots, not calendar integration. Honest framing: minimal-real, not a full ATS inbox.

5. Founder actions

1. Redeploy firestore.rules - carries three security fixes (recruiters could self-set isValidated, claim another company's domain, or self-grant a paid tier), the company team model, and the close-role rule (a role owner may CLOSE their live role, active true->false, but never self-activate). Without it, 'Close / filled' is denied.

2. Verify recruiter@ is a recruiter account - sign in, open For Employers. Company profile = real recruiter account (auto-routes now). 'Create employer account' = it was made via candidate signup and needs recreating through the employer path.

3. Sitemap - DONE: Search Console reports it processed, 63 pages discovered.

3b. Stripe billing - set Vercel env STRIPE_SECRET_KEY + STRIPE_WEBHOOK_SECRET, then add the webhook endpoint <https://ghostproofjob.com/api/stripe-webhook> with SIX events (checkout.session.completed, customer.subscription.updated, customer.subscription.deleted, invoice.payment_failed, charge.refunded, charge.dispute.created). Until this is done, paying customers are granted NOTHING. See docs/stripe-setup.md.

3c. Weekly Content Pack - the marketing engine has never run; trigger it once to confirm.

4. Deployed already: Worker (mode:summary + CAN-SPAM footers), Firestore rules through v107, Vercel FIREBASE_SERVICE_ACCOUNT.

Non-negotiable rules still in force

INSERT-ONLY (never rebuild/redesign; add narrowly). [UI-REVIEW] gate on any layout/view/overlay change. Full drop-in files, never snippets. Works on mobile, iOS, Android, tablet, desktop. No misleading copy: honest 'jump to apply' only, auto-apply is architecturally impossible, no demo data in live views, no Google scraping. Never break a prior fix. Honesty over optimism. [STATE-COVERAGE] matrix before any feature or fix (guest / authed / failed-network / empty-data) with a Playwright test for uncovered states.
